PCEye

Assistive eye tracking

PCEye is the world’s most advanced assistive eye tracker. It enables people with physical disabilities to use a Windows tablet, laptop or monitor up to 27” with just their eyes, even outdoors in bright light.

*Tablet and bracket pictured above are sold separately.

Eye control
Replace a keyboard and mouse with your eyes to control a Windows computer.

Outdoor eye tracking
Access everything on your computer, even while outdoors.

Flexible
Use seamlessly with most Windows devices, on screens up to 27” in size.

Portable
Attach easily to a Windows device and take it with you anywhere.
Control a computer with your eyes

Replace a traditional keyboard and mouse with your eyes and surf the web, connect on social media, play games, create documents and more. Simply connect PCEye to your Windows device via USB and access everything your computer has to offer. This eye tracker offers the flexibility to meet different needs throughout the day. Use it with a larger-screen computer for gaming, a laptop for meetings or a tablet for pared-down outings.

Accessories
PCEye comes with several optional accessories, which can be purchased separately.

**TD Control**
A way to control Windows with just your eyes on an I-Series or PCEye device.

**Communicator 5**
An AAC solution designed to help literate individuals with language disabilities communicate more efficiently.

**TD Snap**
A symbol-supported AAC software offering a choice of solutions, complete with tools and resources.

**Sensory Guru Eye-FX**
A software designed to teach beginner eye gaze skills in an engaging way.

* Included software  ** Optional software
